

Help us Celebrate Jefferson High School's Earth Day 2010 - Solar Panel Installation

With the support of funding through Carbon Concierge and the Together Green program through the National Audubon Society, Jefferson High School's student Sustainability Team has been awarded a grant in honor of Earth Day that will be used to install solar panels on the school's roof. This achievement is a direct result of the student's commitment to sustainability and we want to honor and support this student team by creating community backing, commitment and awareness around this project.

On Earth Day Mayor Sam Adams will kick off an event at Jefferson High that will showcase the solar project and the educational kiosk and materials that will be installed with the project. The event will be created and presented by the students and so we want to construct as great of an opportunity as possible for these kids to succeed and shine on Earth Day.

How can you help?

- Be a part of the celebration by committing your organizations time and energy on the day of the event
- Provide additional funding that will cover the educational components of the solar installation
- Provide resources that can support this project
- Engage in the sustainable careers and training portion of this project
